

# NEW PRODUCT HIGHLIGHT | OCT2021 SWAG 33 10 2697

**SWAG**<sup>®</sup>

To Fit:

Nissan Primastar (X83)  
Vauxhall/Opel Vivaro A, Movano A  
Renault Clio 2, Kangoo 1, Laguna 1  
& 2, Master2, Megane 1, Scenic 1,  
Traffic 2.

Engine: F9Q 1.9 dCi

EN

## Oil Feed Pipe for turbocharger

### Function

The oil feed pipe delivers engine oil to the turbocharger to lubricate and cool the bearings. This oil feed pipe is made from high-quality stainless steel in order to withstand the high temperatures that can be found in the engine bay of a turbocharged vehicle.

### Cause of failure

The flared ends at the end of the pipe can fracture, leading to oil leaking past the O-ring seal and the connector - causing oil to spread over the engine and risking fire.

If the vehicle manufacturer's recommended oil and filter servicing schedule has been extended, this can lead to excess carbon build-up on the inner wall of the pipe. This restricts the oil flow to the turbocharger bearings and causes severe damage to the turbocharger, and possibly the engine as well.

If replacing a turbo on this engine, it is recommended that a new turbocharger oil feed pipe is replaced at the same time. This is to avoid any possible oil leaks and ensure a quality oil supply to the turbocharger
