

ALPINE® C12 Ready Mix -36°C

Super-Longlife coolant red

Properties

ALPINE C12 Ready Mix -36°C is an antifreeze based on ethylene glycol, free of potentially harmful substances such as nitrites, amines and phosphates. Due to an optimal combination of very stable inhibitors based on silicate-free carboxylic acid technology, **ALPINE C12 Ready Mix -36°C** offers excellent corrosion and cavitation protection for the longest possible coolant service life. Further additives prevent the coolant from foaming and prevent deposits. **ALPINE C12 Ready Mix -36°C** offers year-round frost and corrosion protection that is maintenance-free over the entire service life of the engine. The coolant has no negative influence on coolant hoses or cylinder head gaskets.

Application notes

ALPINE C12 Ready Mix -36°C is used as a cooling and heat transfer fluid in combustion engines, regardless of whether engines are made of cast iron, aluminium or a combination of both metals and in cooling systems made of aluminium or copper alloys. **ALPINE C12 Ready Mix -36°C** is especially recommended for light metal engines where special aluminium protection is required at higher temperatures.

ALPINE C12 Ready Mix -36°C can be mixed with most ethylene glycol-based coolants.

Caution: Observe manufacturer's instructions.
